

Table S4. Temporal dynamics of range overlap of four *Drusus* species in the Western Balkans region. Overlap between climatic suitability under present-day and LGM conditions was calculated for each species independently using three niche overlap statistics (Schoener's D (D), the I-statistic (I), and the relative rank statistic (RR)).

	current/MIROC			current/CCSM		
	D	I	RR	D	I	RR
<i>D. croaticus</i>	0.325	0.591	0.652	0.059	0.193	0.608
<i>D. discolor</i>	0.636	0.859	0.752	0.459	0.732	0.676
<i>D. krusniki</i>	0.753	0.950	0.941	0.591	0.850	0.899
<i>D. schmidi</i>	0.749	0.952	0.910	0.615	0.888	0.899
